DETAILED ACTION

Election/Restrictions

Applicant's election without traverse of Group I (claims 10-13) in the reply filed on 09/03/2004 is acknowledged.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 10 and 11 are rejected under 35 U.S.C. 102(b) as being anticipated by Stab (6,019,714).

Stab discloses a method for cutting and folding printed products comprising the steps of driving with a first motor (Fig. 1; via M1) a first loop for cutting a signature (via cutting cylinder 6) and transferring the signature to a first gripper (via 28, 31) with a first motor (via M1 rotate cylinder 6 for cutting the web and also while rotating it convey the web); driving with a second motor (M2) a second loop for tucking the signature into a first jaw (28) and transferring the signature to a second gripper (31); and driving with a third motor (M3) a third loop for tucking the signature into a second jaw (32).

Regarding claim 11: further including altering a phase between at least the first and second loops, so as to set a lap or perform mode change (via by using different motors M1 and M2).

Claim Rejections - 35 USC § 103

Application/Control Number: 10/799,245

Art Unit: 3721

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 12 and 13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Stab (6,019,714) in view of Kepert et al. (5,520,378).

Stab does not disclose a phasing center to alter a phase between a tucker in the second loop and the first jaw nor a phasing center to alter a phase between a tucker and a second jaw in the third loop. However, Kepert discloses a similar method for cutting and folding with using a phasing center (Figs. 2-4) to lower the circumferential speed between the transfer cylinder and the folding jaw cylinder.

Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to have modified Stab's method by using a phasing center on both second and third loop by M1 and M2, as suggested by Kepert, in order to reduce the mass forces (column 5, lines 31-35).

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sameh H. Tawfik whose telephone number is (703) 308-2809. The examiner can normally be reached on Tuesday - Friday from 8:00 AM to 6:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Rinaldi Rada can be reached on (703) 308-2187. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
